To Whom It May Concern:

I first was introduced to the Fitch Fuel Catalyst a couple years ago because I am involved with running a regional drag racing program and some of the competitors were using Fitch. I decided to try it myself and was happy to find just by adding Fitch to my Kawasaki ZX12, I gained 2 HP on the dyno. I also was able to advance the timing a bit more where I couldn't before adding Fitch and ended up with 4 more hp for a total of 6 HP gain overall. I have been running Fitch in my bike for about a year and over 75% of the competitors in my MDC Drag Racing Series are all using Fitch in their bikes.

This year I decided to become involved with using Fitch in my everyday business. I own and operate an Oil Burner/Heating Service company. I bought one of the Fitch in line units to test efficiency on my Beckett oil burner. I was happy to see an increase in combustion efficiency from 83.5% to 85% and the boiler came up to temperature quicker just by installing the Fitch unit. An increase of over 1.5% combustion efficiency is significant in my business. I recommended the Fitch Fuel Catalyst to my customers through a mailer and have since sold and installed numerous units. We conduct the efficiency tests before and after the Fitch installations, and in every case a significant improvement is achieved.

Thanks for a great product !
