

Ford 08 5.4 Liter Gas Engine Fitch Model: F4424B

Mounted on a plate which had a pre-existing unused hole. The plate is used to secure a bundle of wires which need to be pushed up to make enough clearance for the Fitch canister. Fitch canister is mounted just above the transmission about mid of rear of engine behind the doghouse cover which was removed. The hood was opened to access the battery.

This is the OEM Ford spring lock fitting located on the OEM fuel supply line. The hoses included with the Fitch Fuel Catalyst kit contain the same male & female spring lock fittings that will adapt to the OEM spring lock fitting on the supply line.
